**Stratum Global Promotes RFID Product Offering  
Participation in the Intel® Early Access Program and Intel® Software Network  
enhances state-of-the-art scalable RFID solutions**

Littleton, CO, November 8, 2005 – Stratum Global today announced its participation in the Intel® Early Access Program and Intel® Software Network. This involvement represents Stratum Global's vision to provide RFID solutions such as the TagNet that are optimized for Intel® architecture platforms.

RFID is a method of identifying unique items using radio waves. Typically, a reader communicates with a tag, which holds digital information in a silicon microchip and an antenna. The data stored on the microchip is associated with dynamic information, such as date of production or production origin. This data can be retrieved at any point in the supply chain, depending on the organization's criteria.

TagNet RFID Solutions make individual items (objects) and their movements within the supply chain visible to all parties. Passive transactions of pertinent product data at all times allow quick and easy access to relevant inventory/asset management information. This visibility can be used to meet compliance requirements or to improve internal processes.

Each RFID case is unique in one aspect or another. Stratum Global's understanding of hardware infrastructure, environmental factors and business cases provide the foundation for a successful implementation on an Intel platform.

"Stratum Global is excited to be part of the Intel Early Access Program and Intel Software Network. As a world class leader – Intel is making technology more accessible and more versatile for its users. It is with this spirit that Stratum Global developed TagNet, giving our clients more visibility internally and providing them with a technology that can truly change the way they do business," said Jim LaPalermo, vice president, business development, Stratum Global. "TagNet is the ideal RFID

solution for the digital enterprise. Its functionality is optimized on Intel® Centrino® Mobile Technology, Intel® Pentium® 4, Pentium 4 with Hyper-Threading Technology, and Intel® Xeon® architecture. Our customers will find ROI and experience scalable enterprise process improvement with TagNet running on Intel® processor-based platforms.”

“We are pleased to have Stratum Global participate in the Intel Early Access Program and Intel Software Network,” said Melissa Laird, General Manager, Intel Developer Relations Division. “RFID is an emerging technology. Intel is at the forefront of technology solutions that bring value to our channel and our end users.”

### **About Stratum Global**

Stratum Global is a software solutions company and systems integrator that develops and markets Radio Frequency Identification (RFID) solutions for various platforms and Applications. We provide complete implementation services including Site Surveys, Hardware installation & enterprise integration to support the total RFID solution. Stratum Global focuses on small and medium sized manufacturers and suppliers and offers a suite of software that supports the RFID initiative that is rapidly being adopted by forward thinking organizations. Our sole business is RFID throughout the supply chain and has plans to expand into other RFID initiatives as those markets emerge. Quality products, services, support and people are what differentiate Stratum Global from its competition. For more information call 303.730.7343 or visit [www.stratumglobal.com](http://www.stratumglobal.com).
